DEFINITIONS OF WATER RESOURCES RESEARCH

These definitions, developed by the Committee on Water Resources Research of the Federal Council for Science and Technology, February 1966, were used in the preparation of Volume 4 of the Water Resources Research Catalog.

- I. Nature of Water
Properties of Water; Aqueous Solutions.
- II. Water Cycle
General Studies; Precipitations; Snow, Ice and Frost; Evaporation and Transpiration; Streamflow; Groundwater; Water in Soils; Lakes; Water and Plants; Erosion and Sedimentation; Chemical processes; Estuarine Problems.
- III. Water Supply Augmentation and Conservation
Saline Water Conversion; Water Yield Improvement; Use of Water of Impaired Quality; Conservation in Domestic Use; Conservation in Industry; Conservation in Agriculture.
- IV. Water Quantity Management and Control
Control of Water on the Land; Groundwater Management; Effects of Man's Related Activities on water; Watershed Protection.
- V. Water Quality Management and Protection
Identification of Pollutants; Sources and Fate of Pollution; Effects of Pollution; Waste Treatment Processes; Ultimate Disposal of Wastes; Water Treatment; Water Quality Control.
- VI. Water Resources Planning
Techniques of Planning; Evaluation Process; Cost Allocation, Cost Sharing, Pricing and Repayment; Water Demand; Water Law; Institutional Problems; Non-structural Alternatives; Ecologic Impact of Water Development.
- VII. Resource Data
Network Design; Instrumentation; Data Acquisition; Evaluation, Processing and Publication.
- VIII. Engineering Works
Design; Materials; Construction and Operation.
- IX. Manpower, Grants and Facilities
Education-extramural; Education-In House; Research Facilities; Grants, Contracts and Research Act Allotments.
